

FOUNDATION PORTFOLIO

FOR INVESTORS SEEKING TOTAL RETURN | 2Q18

Momentum Investing

Momentum, a well-documented market anomaly, helps us identify and concentrate on assets with strong trends and positive risk/return characteristics.

Active Risk Management

We believe it's important to reduce risk when market conditions deteriorate. This is accomplished through the use of Cash and/or U.S. Treasury Bonds.

Systematic Process

Our portfolios are driven by a systematic, repeatable process that removes emotion from investing and makes returns more explainable.

Objective

The FOUNDATIONS PORTFOLIO seeks to provide stable returns over time, consistent with a total return objective.

Investment Strategy

Multiple assets classes are used to maximize diversification and provide varying sources of returns. Stocks, bonds and alternatives can be used in different percentages to adjust to current market conditions.

Portfolio Details

Inception: April 1, 2018

Benchmark: 50% S&P500/ 50% Bloomberg Barclays U.S. Aggregate Bond Index

Portfolio Statistics

Alpha: N/A

Beta: N/A

Upside Capture: N/A

Downside Capture: N/A

Standard Deviation: N/A

Sharpe Ratio: N/A

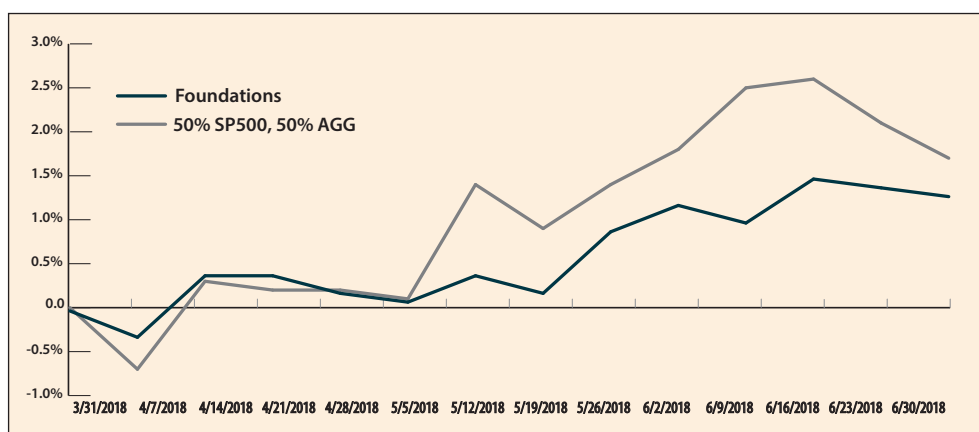

Portfolio Statistics are based on a 3 year rolling time-frame, and are calculated using gross monthly return data relative to the portfolio benchmark.

Source: Morningstar Direct

Trailing Returns as of 6/30/2018*	Gross Return	Net Return	Benchmark Return
1 Month	0.16%	0.16%	0.34%
3 Month	1.22%	1.04%	1.68%
YTD	N/A	N/A	0.50%
1 Year	N/A	N/A	6.74%
3 Year	N/A	N/A	6.81%
Inception (1/1/2015)	1.22%	1.04%	1.68%

*Gross Returns are presented before management fees, but after all trading expenses and all expenses charged by the underlying funds and investment vehicles. Net Returns are based on gross returns and are calculated by deducting the management fee charged both by Fund Architects, LLC., and any introducing advisor if applicable. Returns shown over one year are annualized. See next page for additional disclosures.

Investment Growth 4/1/2018 - 06/30/2018

Benchmark – 50% S&P500/ 50% Bloomberg Barclays U.S. Aggregate Bond Index

Alpha – Alpha measures the difference between an investment's actual returns and its expected performance, given its level of risk as measured by beta. A positive alpha figure indicates the investment has performed better than its beta would predict. In contrast, a negative alpha indicates that the investment underperformed, given the expectations established by its beta. Alpha is often seen as a measure of the value added or subtracted by a portfolio manager.

Beta – Beta is a measure of an investment's sensitivity to movements in a benchmark. A portfolio with a beta greater than one is more volatile than the benchmark, and a portfolio with a beta less than one is less volatile than the benchmark.

Up/Down Percentage Ratio – Up/Down percentage ratio is a measure of the number of periods that the investment outperformed/underperformed the benchmark when the benchmark had positive/negative returns. A larger/smaller ratio is better.

Standard Deviation – Standard deviation is a statistical measurement of dispersion about an average, which, for an investment, depicts how widely the returns varied over the time period indicated. Morningstar computes standard deviation using the trailing monthly total returns for the time period. All of the monthly standard deviations are then annualized.

Sharpe Ratio – Sharpe ratio is calculated by taking the investment's average monthly excess return over the user-defined risk-free rate and dividing by the monthly standard deviation of excess returns to determine reward per unit of risk. A higher Sharpe ratio reflects better historical risk-adjusted performance.

Currency – The currency used for data in the report is US Dollar (USD).

About Fund Architects

Fund Architects is a SEC-Registered Investment Advisor. The firm provides discretionary, fee-based money management services to other Investment Advisors and individual investors around the country.

The Asset Allocation and Equity Sectors charts above are calculated internally using Morningstar Direct software, and utilizes historical data for trades placed in the model portfolio.

This data has not been audited by an independent third-party source.

Performance data may not be representative of any individual client account as actual client account results may be lower or higher due to account specific activity. The performance data shown represents past performance, which is not a guarantee of future results. Investment returns and principal value will fluctuate, so that investors' shares, when sold, may be worth more or less than their original cost.

All investment strategies have the potential for profit or loss. Changes in investment strategies, contributions or withdrawals, and economic conditions may materially alter the performance of your portfolio.

Different types of investments involve varying degrees of risk, and there can be no assurance that any specific investment or strategy will be suitable or profitable for a client's investment portfolio.

Historical performance results for investment indexes and/or categories, generally do not reflect the deduction of transaction and/or custodial charges or the deduction of an investment management fee, the incurrence of which would have the effect of decreasing historical performance results. Depending upon the holdings in your portfolio, your investment objectives, and your risk temperament, it may be more appropriate to measure performance against a different benchmark. There are no assurances that a portfolio will match or outperform any particular benchmark.
